

Monostable Multivibrator Using Transistors

Product code: GE343

Objective: Monostable Multivibrator Apparatus has been designed to study the operation of Monostable Multivibrator using Transistors.

.Features:

- Two transistors BC 547 on front panel of the instrument.
- Fixed DC regulated power supply of 12V to start 'ON' the circuit
- A combination of resistances & capacitors for biasing the circuit & taking output
